

Return Battery Packing Guide

Need to return a battery? No problem! Use our easy guides to safely package parts to ensure no damage occurs during shipping. Failure to do so could result in parts an ineligible return.

To get started, you'll need a sturdy box, the return battery in its original protective bag or bubble pouch, bubble wrap, and packing tape.

Step 1: Line bottom of the box with protective bubble.

Step 2: Place battery in original protective bag or bubble pouch on top of bubble.

Step 3: Place bubble over battery. Use enough bubble to prevent movement. If returning multiple batteries, secure each part in its original packaging or protective bubble.

Step 4: Tape box and affix battery label and mailing label to ship back to AGP.
