

Return Cable Packing Guide

Need to return a cable or ribbon? No problem! Use our easy guides to safely package parts to ensure no damage occurs during shipping. Failure to do so could result in parts an ineligible return.

To get started, you'll need a sturdy box, the return cable in its original protective bag or bubble pouch, bubble wrap, and packing tape.

Step 1: Line bottom of the box with protective bubble.

Step 2: Place cable in original protective bag or bubble pouch on top of bubble.

Step 3: Place bubble over part. Use enough bubble to prevent movement. If returning multiple parts, secure each part in its original packaging or protective bubble.

Step 4: Tape box and affix mailing label to ship back to AGP.
