

Return Boards Packing Guide

FOR MOTHERBOARDS, DAUGHTERBOARDS, USB & IO BOARDS

Need to return a board? No problem! Use our easy guides to safely package parts to ensure no damage occurs during shipping. Failure to do so could result in parts an ineligible return.

To get started, you'll need a sturdy box, the return board enclosed in a static bag, bubble wrap, and packing tape.

Step 1: Line bottom of the box with protective bubble.

Step 2: Place board in static bag on top of protective bubble.

Step 3: Place bubble over part. Use enough bubble to prevent movement. If returning multiple boards, secure each board in a static bag.

Step 4: Tape box and affix mailing label to ship back to AGP.
